Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

The present invention relates to an enhanced CDMA demodulation scheme for decoding CDMA signals in order to reduce interference due to communication overlap. The closest prior art of record, Gilhousen (US 5,715,236) and Hendrickson et al. (US 5,974,584) disclose a method for improving the quality of a received signal in which data is conveyed in very short segments and a bit is associated to each segment to identify at the receiving end. The loss of a segment is insignificant because of its size. However, Gilhousen and Hendrickson, singularly or combined fail to disclose the unique method steps of "determining if the analog results correspond to a predetermined digital state; generating a digital output, corresponding to an associated multiply or accumulator device comprising first and second series connected transistors providing multiplication operation (claim 14), and subtracting the output of each multiplication device, from analog results of each corresponding multiply or accumulator device, prior to input to data conversion device" (claims 1, 10, 14, 16 and 21). These significant features render the application claims allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
